

Ventilated Enclosures

Solutions to maintain high ingress protection

Industry Problem

Negative pressure, high humidity and/or condensation inside enclosures can compromise ingress protection.

BERNSTEIN Solution

A ventilation gland can be used to create continuous ventilation and pressure equilibrium, whilst still maintaining the enclosure's designed ingress protection level.

Helps to...

- prevent enclosures from flooding in the most demanding operating environments
- protect trackside and train-borne equipment

One Stop Solutions

Customised & Bespoke Enclosures

Bernstein has the experience, technical expertise & specialist manufacturing capabilities to provide enclosures to suit your application.
