

# Single-ended and double-ended cordsets

## WHAT IS A SINGLE-ENDED CORDSET?

A single-ended cordset is used to connect a sensor or switch with a plug connection to a terminal block.

For this purpose, the cable is provided with a socket on one side and for assembly on the other side.

## WHAT IS A DOUBLE-ENDED CORDSET?

The double-ended cordset is used to build up the sensor chain in the BERNSTEIN Smart Safety System. It is used to connect the T-adapters to each other.

For this purpose, the cable is equipped with a socket on one side and a connector on the other.

# One-way screws

## WHY ONE-WAY SCREWS?

In order to reduce the possibility of manipulation of safety switches and, if necessary, their actuators, DIN EN ISO 14119 allows the fastening of switches and actuators with one-way screws.

\* Only with correspondingly installed flange plug and with corresponding and mounted cable coupling.

\*\* Attention: For technical reasons, the 5-pole version of the built-in plug has a rated voltage of 60 V only. This means that if this built-in plug is installed in a switch that is designed for voltages higher than 60 V, the rated voltage of the switch with the 5-pole plug is reduced to 60 V! It is not permissible to operate the switch with voltages higher than 60 V.
